Specialists EMERCOM of Russia reached the 315th point of the Sayan-Shushenskaya hydro-electric power station turbine room, where the rescue works and bailing are going on

Specialists EMERCOM of Russia reached the 315th point of the Sayan-Shushenskaya hydro-electric power station turbine room, where the rescue works and bailing are going on. 53.5 tones of oil are bailed from the turbine room.

During the working conference the Head EMERCOM of Russia Sergey Shoigu noted, that the point where the specialists are working must be checked at the plan of the turbine room every two hours as at point 315 and lower the oily liquid must be treated.

The Chief Engineer of the Sayan-Shushenskaya hydro-electric power station Andrey Mitrofanov reported that the staff of the station will take part in rescue works together with the specialists EMERCOM of Russia, as the hydro-electric power station workers “very well know the layout at the lower points”.
