

The Ministry of the Russian Federation for Civil Defence, Emergencies and Elimination
of Consequences of Natural Disasters

01.02.2020 09:02

Daily operational forecast for February 1, 2020

The operational forecast of possible emergencies on February 1, 2020 on the territory of the Russian Federation is determined by the passage of 2 cyclones, one anticyclone and the atmospheric fronts.

Emergencies caused by dangerous weather events are not predicted in the Russian Federation.

Due to the impact of complex adverse weather events in the form of a snowstorm, wind gusts up to 15 m/s and temperatures up to 47 °C in one subject of the Ural Federal District (Yamalo-Nenets Autonomous District), difficulties in the operation of all types of transport, disruption of energy, communications and housing facilities are predicted.

Probability forecasting:

failure of people and equipment under ice on water bodies of the Far Eastern, Siberian, Ural, Volga, Northwestern and Central Federal districts;

snow avalanches on the territory of the mountainous regions of the Siberian Federal District (Altai, Khakassia and Tyva, Krasnoyarsk Territory), North Caucasian Federal District (Karachay-Cherkess and Chechen Republic, Ingushetia) and Southern Federal District (Adygea and Krasnodar Territory);

activation of exogenous-dynamic processes on the territory of the mountainous regions of the North Caucasian and South Federal districts (the Republic of Adygea and the the Republic of Crimea, Krasnodar Territory).

The information was prepared based on the data of the Hydrometeorological Center of Russia and the All-Russian Research Institute of Civil Defence and Emergencies (FC).
